# Transformer

TRANSFORMING TESTS FOR EXECUTION!

Conformiq Transformer™ extends the Conformiq 360° Test Automation™ solution, for complex system testing at the speed of development.
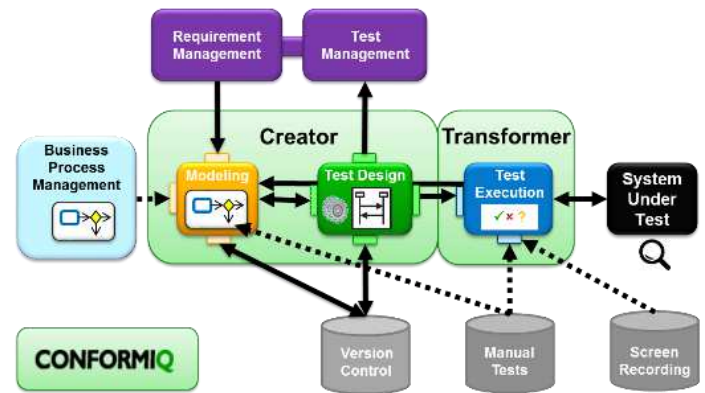

Conformiq Transformer shortens the path to test automation, simplifies model-based testing (MBT) adoption using existing methods, and automates manual test execution. Along with **Conformiq Creator,** which generates executable test cases, scripts and documentation from models, it automates and transforms test design.

Why Conformiq Transformer?

- Eliminate scripting as you know it, automating test execution without programming, for both new and existing test cases
- Use existing recordings and test cases to automate model creation for Conformiq Creator, combining the benefits of MBT with scripter-less test automation
- Deliver a consolidated view of automated test case design, creation, execution, management and validation

## Conformiq 360° Test Automation: A Total Testing Transformation

Complete automation of the end-to-end testing process

The Conformiq Transformer Platform

- Automates the execution of new and existing tests, improving the productivity of the entire QA organization
- Automates test execution by extending industry-standard test automation tools, including existing and open source test execution tools
- Transforms manual tests into automatically executable tests

Save up to 70% of required effort to automate test execution

Conformiq Software Development Lifecycle Integrations

CONFORMIQ

CONFORMIQ NEXT-GENERATION TESTING BENEFITS

- ✓ Increase productivity:
    - ✓ Automate functional testing with minimal manual involvement
    - ✓ Leverage existing test assets – test cases, requirements, prototypes
    - ✓ Eliminate test automation backlog
- ✓ Increase and optimize coverage:
    - ✓ Thoroughly test complex systems with a minimum of test cases; optimize regression test suites
    - ✓ See generated tests, what they cover, and why they're needed; gain visibility into what has been tested and what has not
- ✓ Integrate the test flow:
    - ✓ Tightly integrate with all SDLC tools and processes
    - ✓ Directly link to automated execution frameworks
