

Conformiq 360° Test Automation™ and iRise™

Conformiq / iRise integration: the fastest way to automated software testing success!

Capture better requirements and designs with iRise, then use the prototype to automatically generate, update and optimize your test suites in Conformiq.

- **iRise:** Collaborate seamlessly on interactive prototypes, diagrams, user stories and requirements.
- **Conformiq 360° Test Automation:** The most sophisticated and comprehensive automated test design solution in the industry, enabling the next generation of testing for complex environments.

Integration Advantages

For business analysts:

- Quickly create interactive prototypes that simulate system functionality – no coding
- Use the prototype to drive the conversation with stakeholders and capture their requirements in context – iterate and validate till you get them right
- Prototype robust functionality with sufficient detail for test generation
- Validate (iRise) model to identify any process or specification errors

For test analysts:

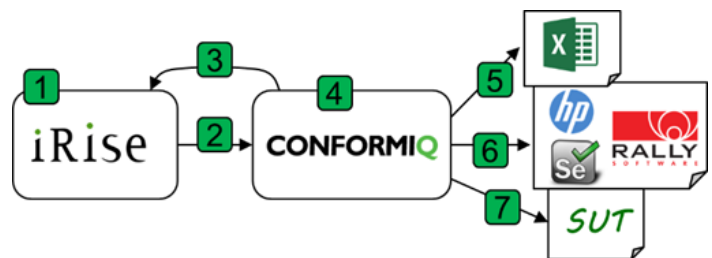

- Import prototypes / models via full integration with Conformiq cockpit
- Dramatically speed up test planning
- Synchronize business analysts and test planners using a common language
- Accelerate time to value, through simplified adoption of model-based testing
- Automatically generate models, test scripts and documentation, with customized test exports

For testers:

- Automatically generate user interface and functional test scripts and documentation from the iRise prototype
- Use and reuse iRise prototypes throughout the software development life cycle (SDLC) for accurate requirements validation and testing
- Automatically update tests when the spec (iRise model) changes
- Upload and link tests to test management tools automatically

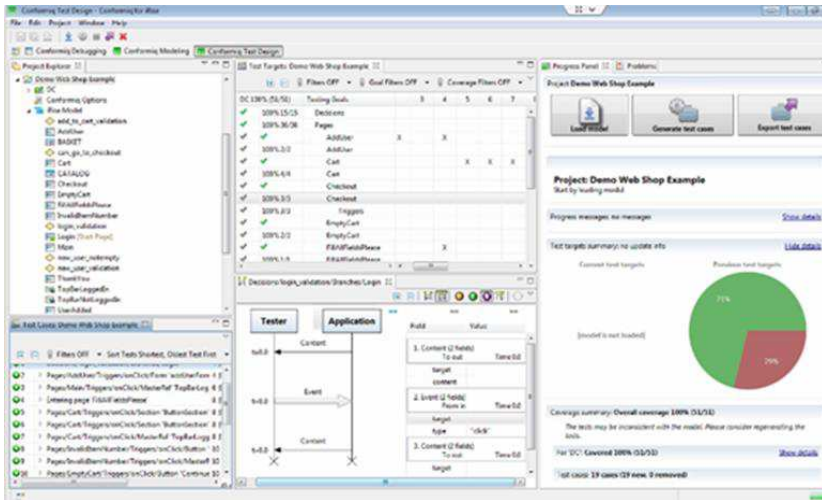

Simple Steps Deliver the Benefits

Deploy Conformiq / iRise Integration with these steps:

1. Prototype business operations in iRise
2. Iteratively import iRise models as-is into Conformiq
3. Debug, validate, and improve iRise model
4. Automatically generate tests, scripts and documentation with Conformiq
5. Export test documentation for business analysts, others and upload documentation automatically to test management tools
6. Use tests and scripts for test execution
7. Run tests on the actual application or software system under test (SUT)

Integrated Conformiq Cockpit / GUI for iRise

The fastest way to automated testing success!
